Education

Indian Institute of Information Technology Ranchi

Ranchi, Jharkhand

Bachelor of Technology in Computer Science and Engineering (CGPA: 8.09)

2023–2027

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems, Object-Oriented Programming, SDLC, Computer Networks

Work experience

Software Developer Intern - Illuminora

August 2025 - October 2025

Next.js · Framer motion · TypeScript · React Bits · Resend · Tailwind CSS

- Solely built and deployed Illuminora’s primary client-acquisition website from design handoff to production.
- Delivered 4+ client websites independently, including a real estate property listing platform, within 1-week turnaround from design handoff to live deployment via CI/CD on Vercel.

Projects

CollabX (Live Demo)

2026

Express.js · PostgreSQL · Redis · TypeScript · WebSockets · Tailwind CSS · Node.js · Next.js · Javascript

Collaborative document editor with distributed real-time sync across multiple backend instances.

- Built a distributed real-time collaborative editor where block edits flow through REST → PostgreSQL → WebSocket broadcast, with Redis Pub/Sub syncing events across multiple backend instances.
- Implemented room-based presence and cursor sync over WebSockets with 50ms throttling, capping cursor events at 20/sec per user to reduce unnecessary network load.
- Designed a normalized PostgreSQL schema with optimistic concurrency control via a version column to detect and reject stale block updates during concurrent edits.
- Secured workspace access via JWT authentication and invite-token based membership, with cascade deletes ensuring referential integrity across blocks and invites.

Webhook Delivery Engine (GitHub)

2026

Node.js · Express.js · PostgreSQL · Redis · Bullmq · Docker · TypeScript

Distributed system with queue-based async processing, automatic retries, and signed payload verification.

- Decoupled API and worker processes via a queue, pushing incoming events for async processing to keep ingestion fast under load, with all services containerized via Docker Compose for single-command startup.
- Implemented retry logic with exponential backoff (30s–240s) and a dead letter queue to isolate permanently failing deliveries, tracking attempt counts and delivery across PENDING/PROCESSING/DELIVERED/FAILED states.
- Designed HMAC-SHA256 request signing on the sender side and built a dummy receiver server that verifies the signature header to confirm webhook authenticity end-to-end.

LegalLens AI (Live Demo)

2025

Next.js · Express.js · MongoDB · Gemini API · TypeScript · ShadcnUI · Tailwind CSS · Framer motion

Full-stack AI app that analyzes contracts and flags risky clauses with AI-generated summaries.

- Integrated the Gemini 1.5 Flash LLM API, prompting it to return structured JSON with clause-level risk classifications, summaries, and suggestions, with fallback error handling for malformed model output.
- Built a PDF parsing pipeline (pdf-parse, jsPDF) to extract contract text and generate downloadable reports, with JWT-secured routes and analysis results persisted in MongoDB.

Technical Skills

Languages: C++, JavaScript, TypeScript, C

Frontend: Next.js, React.js, Tailwind CSS, ShadcnUI

Backend: Node.js, Express.js, REST APIs, WebSockets, JWT Authentication, Redis, Bullmq, Auth0

Databases: PostgreSQL, MongoDB

Developer Tools: Git, GitHub, Linux (WSL/Ubuntu), Docker, CI/CD, Vercel

Problem Solving: 600+ DSA problems solved (LeetCode, GFG)
